

DIAMOND GRINDING DISCS

AGGRESSIVE PREP FOR COATINGS

For use on angle grinders for rapid removal of paint, epoxy and other floor coatings. They work when other abrasive products fail on bitumen, pitch and similar soft coatings by avoiding creating excessive heat. The tips scour quickly and resist loading up. Watch out for nails as they can damage the PDC points.

PREPARATION FOR CONCRETE

Aggressive grinding designed for preparation work but also suitable when the surface is not required to be as smooth, fast cutting.

Diameter	PDC Shark	5 Seg	6 Seg
125mm	1130036		
180mm	1130041	1130001	1130006

GENERAL PURPOSE

Spiral and **double row** are used to smooth and shape concrete and **most stone types**.

The **spiral** is the general one with options for **different hardness of concrete**.

The **double row** provides a **half way house** between a spiral and turbo grinding disc, **slower** to cut but **flatter/smooth** than spiral.

Diameter	Spiral Medium / Hard	Spiral Very Hard	Double Row
105mm	1130046		1130021
180mm	1130066	1130071	1130026

SMOOTH GRINDING

Turbo diamond grinding discs are for **all stone types and concrete mixes**, giving a relatively **smooth result** using an angle grinder.

They are **highly effective** for grinding and smoothing **hard stone**

Key points:

- Turbo segmented making it easier to achieve a smoother result.
- Suitable for harder stone types, granite etc.

Diameter	Turbo Medium	Turbo Fine
105mm	1130086	1130081
180mm	1130091	

SPECIAL PURPOSE

Vacuum brazed diamond grinding wheel for grinding **marble, granite, cast iron, alloy steels** and **hard composite materials**.

Diameter	Vacuum Brazed
105mm	1130096
180mm	1130101
